THE WAR IS OVER??

We promised you last year that when the war was over we would try to give you better service. The fighting overseas has stopped now and many of our boys are home, but we see little indication that either those who were over there or those who stayed home are ready to go back to working for a living. Their memory is short and they do not remember the mess that the grabbing for something-for-nothing got us into the other time.

So far as we are able we will dig and plant all orders this spring. It does not now look as tho we could yet begin to do outside work such as trimming or maintenance. We will try to work a little harder when we do work, but so long as we can not do everything wanted anyhow, I expect that we will occasionally run off to the hills for a day or so, and spend our evenings working on the Green Thumb.

To save time and paper this spring we are again putting out a very abbreviated list of our plants. We are classifying them in groups of sizes and kinds and listing them at uniform prices. We still have a few plants of almost everything we originally grew, but are out of many sizes. Where we have a reasonable stock of a very good plant we have called especial attention to it. We will have a limited supply of fruit and berries.

Refer to our complete catalog of past years for descriptions of plants and planting lists. If you have mislaid your copy ask us for another.

Prices quoted are dug (and delivered if possible.) Where we plant an order we charge one third of the cost of the material. This planting charge includes complete guarantee.

There have been some rumors that we were going out of the nursery business. What has happened, is that we have dissolved the old incorporation and sold off land to satisfy the other stockholders. What is left now we will own personally and as soon as labor is available we intend to remodel the whole nursery and be able to concentrate on fewer and finer plants.

You are always welcome to come out to the nursery to look over the plants and become acquainted with new ones or pick out those you want to plant. We still have many rare and unusual things.

In the following lists we have revised the nomenclature to conform to the recommendations given in "STANDARDIZED PLANT NAMES." "Cl." indicates a clon, propagated by cuttings or grafts. "Hv." indicates a horticultural variety or hybrid.
